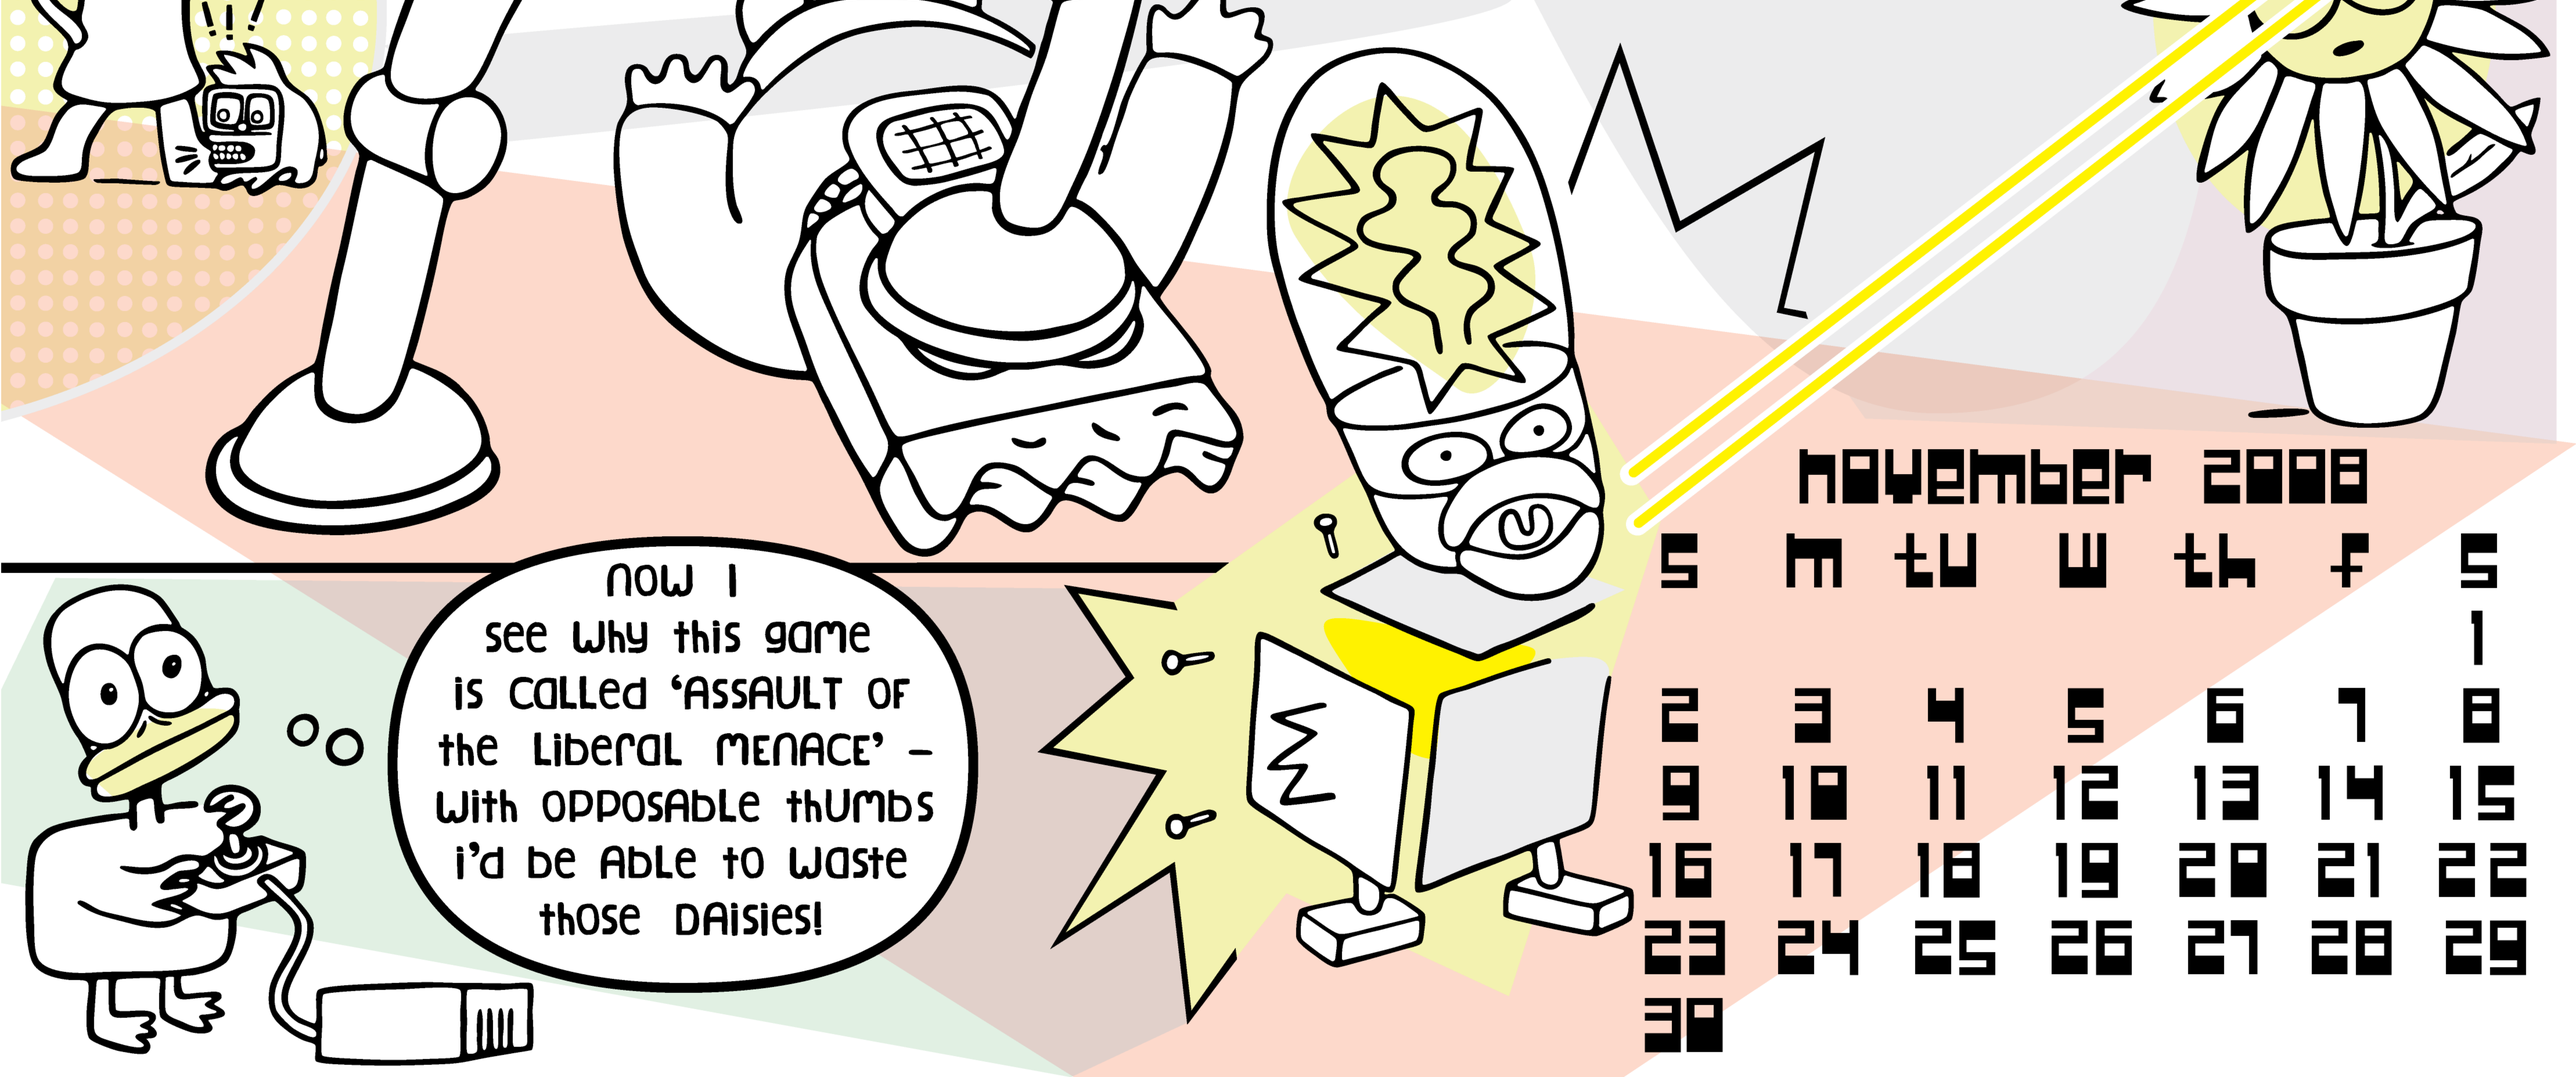
Why not a war on warming?

this Lucha neo-Libre is problematico. ALL the matches is fixed. OUR corporatized opponents wield super power while we are just men of flesh and blood. but still we want to believe that the fight is real. where are the real laser daisies? what lab accident will give us the power to defeat our well-fed illusions?

it's time to build a wall around our freedoms which we love. This will trap all the freedom on the inside. ALL the malcontents who want to disrupt progress will be outside, where we send our radioactive waste, sewage, smoke, acid rain, and garbage!

don't forget the missile shield dome!

what new virus will come from outer space to infect homo sapien with more sapience and less ignorance, greed, and stupidity?


now I see why this game is called 'ASSAULT OF the Liberal MENACE' – with opposable thumbs i'd be able to waste those DAisies!
